

Test Automation

The bonus mini-project report is only one page - one paragraph for each item below and one screen shot for third item. Then you will give a demo on your implementation.

1. What feature/function you want to add to your baseline system?

Please select some feature that is an improvement of an existing function.

2. What tests do you want to perform?

Please come up with a short checklist of the tests you want to perform.

3. How do you plan to implement it?

Either you implement a test driver yourself or you rely on Selenium. A screen shot of either approach should be included here.

After the final exam, please come to my office to give the demo.
