

Scheduling Example

For the class project, the six milestones are predefined. Therefore you can use the due date of each milestone as the ending time of a task, or a number of sub-tasks.

Task	Week	1	*2	3	4	*5	6	*7	8	*9	...
Requirements		o	x								
Design				o		x					
Coding											
Code#1						o	x				
Code#2							o	x			
Code#3						o		x			
Testing											
Test#1							o		x		
Test#2								o		x	
...											

Legend: * indicates the due date of a milestone
o indicates beginning time of a task or sub-task
x indicates ending time of a task or sub-task
